

THEJASWI PRADEEP

AI/ML Engineer | LLM Applications | Full-Stack AI Solutions

+91-6238542357 | thejaswipradeep11a@gmail.com | [GitHub](#) | [LinkedIn](#)

PROFESSIONAL SUMMARY

Aspiring AI/ML Engineer with foundational knowledge in building intelligent applications, predictive models, and LLM-based solutions using Python. Familiar with machine learning algorithms, basic deep learning frameworks, and data preprocessing techniques. Has hands-on experience through academic projects involving LLM use cases, integration of third-party AI APIs (such as Google Gemini), and developing simple full-stack applications. Strong understanding of data structures, algorithms, NLP concepts, and cloud fundamentals.

TECHNICAL SKILLS

AI / ML: Machine Learning, Deep Learning, NLP, LLM Integration, Prompt Engineering, Predictive Modeling, Clustering, Recommendation Systems, Model Evaluation & Retraining

Libraries & Frameworks: Scikit-learn, Pandas, NumPy, Matplotlib, Google Gemini AI, REST APIs, Flask

Languages: Python, Java, C, SQL

Frontend: React.js, HTML, CSS, Figma

Databases: PostgreSQL, MySQL, SQLite

Cloud & Tools: AWS (Basics), Render, Git, Jupyter Notebook

Concepts: DSA, OOP, Operating Systems, LLMOps, Model Deployment, Agile

EXPERIENCE

Machine Learning & AI Intern | ICT Academy of Kerala

Oct 2024

- Developed and deployed AI-based predictive models and machine learning algorithms to solve real-world classification and regression problems.
- Performed data preprocessing, feature engineering, and model evaluation to optimise performance metrics.

UI/UX Intern | Cognifyz Technologies

2025

- Designed responsive, user-centred UI prototypes using Figma for AI-powered product workflows.
- Collaborated with cross-functional teams to translate complex AI system requirements into clean, intuitive interfaces.

AWS Cloud Intern | IIIT Kottayam

May 2023

- Worked with AWS cloud infrastructure and deployment basics, including compute, storage, and networking services.
- Gained foundational knowledge in scalable cloud architecture relevant to AI/ML deployment pipelines.

PROJECTS

LLM-Powered Lost & Found Management System

- Designed and built an AI-enhanced web platform integrating Google Gemini AI for a conversational chatbot and image-based auto-fill, demonstrating practical LLM application with real-world guardrails.
- Engineered LLM prompt pipelines to ensure high-quality, accurate outputs and prevent hallucinations in item-matching scenarios.
- Built scalable backend APIs and secure database architecture to handle dynamic user requests efficiently.
- Implemented advanced UI interactions using HTML, CSS, and JavaScript for a seamless user experience.

CrediLens: Blockchain-Powered Product Credibility Platform

- Built a full-stack platform generating product credibility scores using producer data and consumer feedback, applying a weighted scoring algorithm.
- Developed Flask-based backend with REST APIs for authentication, data processing, and scoring logic.

- Implemented blockchain-based hash storage on Ethereum for tamper-proof data validation, ensuring model output integrity.
- Designed PostgreSQL database schema and deployed the application on cloud (Render) in a production environment.

Retail Sales Prediction & Product Recommendation System

- Developed a machine learning predictive model using Linear Regression to forecast product sales from pricing and discount features – directly applicable to production-grade ML frameworks.
- Built a recommendation engine using cosine similarity to suggest related products, improving customer targeting accuracy.
- Designed and optimised SQL queries for efficient data storage, retrieval, and model feature extraction.

Customer Segmentation using Machine Learning

- Applied unsupervised learning (K-Means clustering) to segment customers based on purchasing behaviour patterns, enabling data-driven decision making.
- Conducted thorough data analysis to identify recurring patterns and distil root issues within customer data.
- Visualised cluster results using Python data visualisation libraries (Matplotlib / Seaborn) to communicate insights clearly.

Travel Buddy — Full-Stack AI Travel Planning Platform

- Built a full-stack travel planning platform using Flask and REST APIs, integrating third-party APIs for personalised itinerary generation.
- Designed backend to handle dynamic user requests and real-time data processing efficiently.

EDUCATION

B.Tech in Computer Science & Engineering | SCMS School of Engineering and Technology, Kerala 2022 – 2026

- Expected CGPA: 7.0 | Relevant Coursework: Machine Learning, DSA, Database Systems, Operating Systems, OOP

Higher Secondary Education | Amrita Vidyalayam, Thalassery 2020 – 2022

LEADERSHIP & RESPONSIBILITIES

- **Tech Fest Core Committee Member (2025):** Coordinated planning and execution of technical events; managed communication and logistics across teams.
- **Coordinator – NAAC Visit (2024):** Coordinated cross-departmental activities during institutional accreditation.
